

Wubba Lubba Dub Dub's SLASH 'N' BASH!!!!!!!!!!!!

A User Manual

Hello! I suppose if you're reading this, you've found yourself desiring to play SLASH 'N' BASH!!!! If so, you've come to the right place. If not... go away. Actually, play anyway. It's pretty fun.

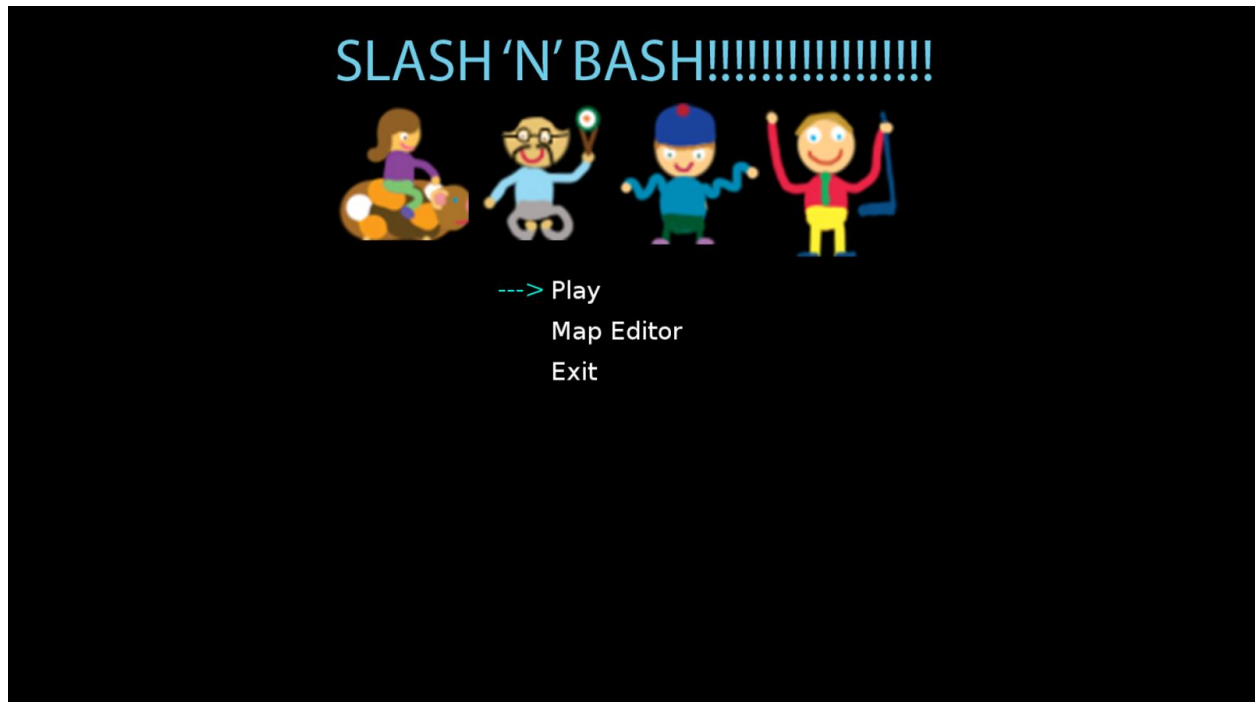

SLASH 'N' BASH is a 2D top-down fully multiplayer hack 'n slash adventure!

Note: If you want to play on Linux or Mac, you'll have to [download](#) the corresponding version of the LOVE library from LOVE's page.

- To play, simply run the command

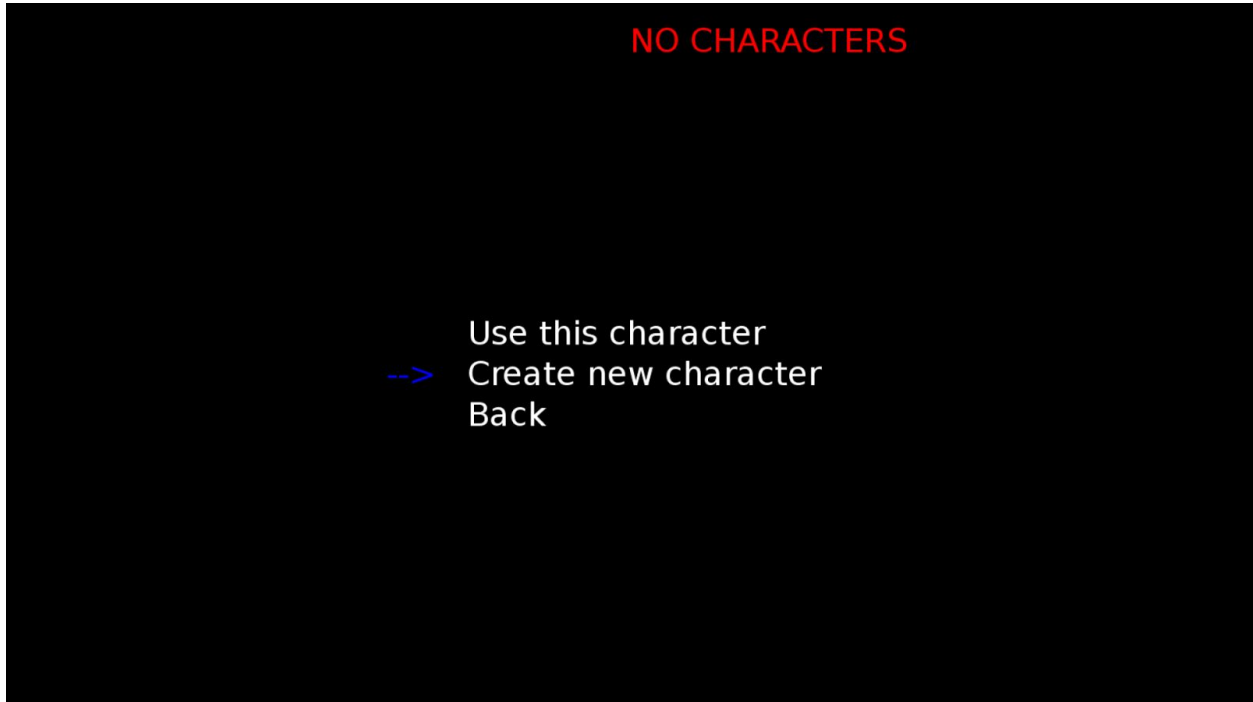

love test.love

From the **/Game/** folder of the game, or run the executable **Game.exe** provided in the zip folder supplied in the most recent ['Releases' entry in our Github page](#).

1. Creating A Character

First, after clicking play (Arrow keys to navigate, Enter to select), you will need to make a character. This is as simple as selecting “Create new character” as shown.

Then, select your character sprite and name it! Afterwards, click **Create**.

2. Journey of the Lone Wolf

After you create your character, select **Use this character** to play as the character. Now, you'll have your choice of whether to play Singleplayer or Multiplayer. If you choose Singleplayer, you'll immediately be thrust into the thrill of the game, with no one to cover your back!

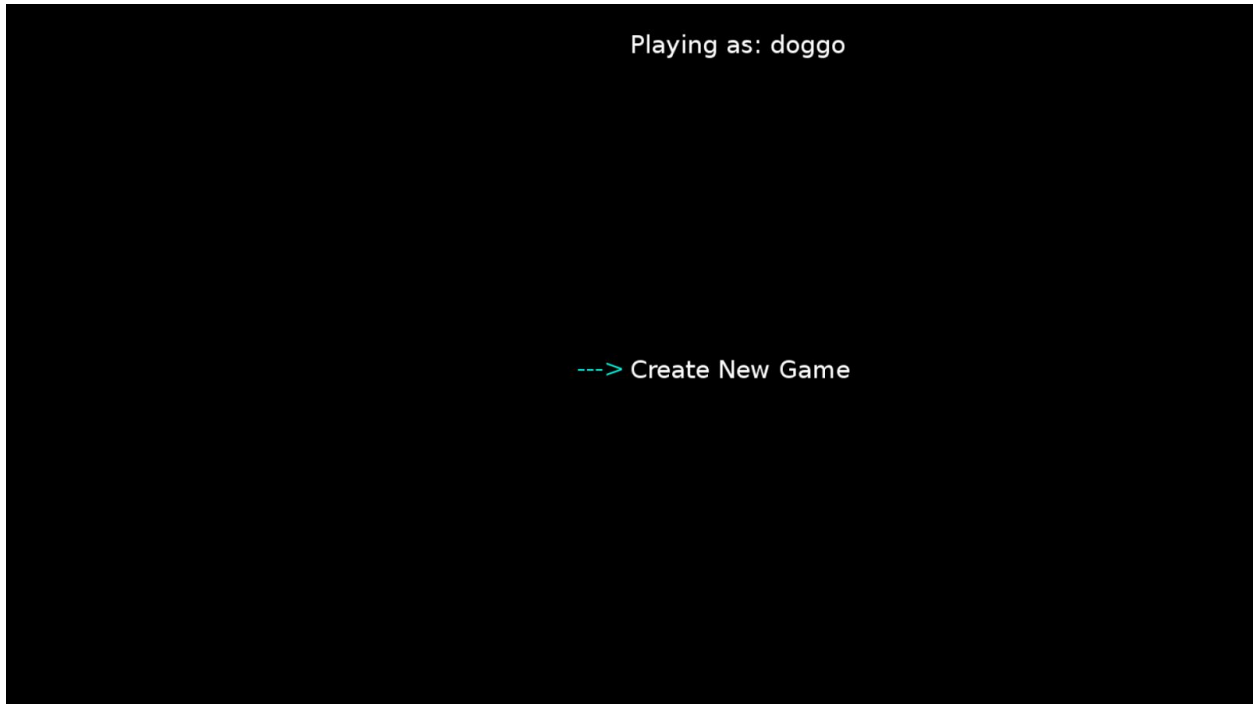

Playing as: doggo

---> Singleplayer
Multiplayer
Back to character selection

3. Joining The Wolf Pack

If you like a thrill, Multiplayer is the way to go. If you select **Multiplayer**, you can either start a new game or join one that's active! Don't worry, you can leave and come back and your stats and progress will be saved. If you want to create a new game, select the option and enter a name for your game, finally selecting **Create** when you are finished.

Note: If our servers are down, Multiplayer will not work. If you want to try out the Multiplayer, shoot an email to the creators of the game and they will put those servers right up!

3. Sculpt Your World

If you want to try your hand at making a map, fear not! A fully functional map editor has been included. From the main menu, select **Map Editor**. From here, you will be guided on screen with how to get your dream map built.
